

Power Industry Expertise

Eurofins TestOil offers extensive and thorough testing specific to the needs of the power industry.

Inherent in the power generation industry are distinct fluid challenges that ultimately decide the operational reliability of plant equipment. Whether your plant is powered by fossil fuel, nuclear energy, gas, hydro, or wind, Eurofins TestOil maintains the expertise you require to understand the condition of your fluid and equipment health.

Eurofins TestOil Experience

Our focus is power and our client base of over 400 power plants across the Americas, including corporate programs with some of the largest utilities in the U.S., offers you a distinct competitive advantage in working with a laboratory that understands the working environment of your equipment.

Eurofins TestOil is unique to the power industry in the variety of reporting tools offered. We don't pigeonhole you with a one-report-fits-all mentality. We have developed custom reports for Varnish Potential Analysis, EHC Fluid Analysis, Turbine Lube Analysis, Filter Debris Analysis, and Routine Oil Analysis. All of which should be integral to your overall fluid analysis program.

Click on each analysis type to learn more.

Lubricant Oil Analysis

Turbine Oil Analysis

Varnish Potential Analysis

EHC Fluid Analysis

Filter Debris Analysis
